Summary

Third-year CSE undergrad at RV University (AI/ML Major) building **production-grade AI and Gen AI systems**: multi-agent LLM pipelines, RAG document intelligence, CNN-based classifiers, and generative super-resolution models. Comfortable end-to-end from model design and training to deployment. Actively working in the **Agentic AI and LLM** space, seeking an internship to contribute real code from day one.

Skills

Languages: Python, JavaScript, TypeScript, HTML/CSS

AI and ML: PyTorch, TensorFlow/Keras, OpenCV, Scikit-learn, CNNs, Transfer Learning

Gen AI and LLMs: LangChain, RAG, GraphRAG, Agentic AI, Prompt Engineering, Groq API, Llama 3.3 70B, MCP Server

Web, Backend and Tools: React 18, Node.js, Express, FastAPI, Flask, Vite, Vercel, Git, Jupyter, VS Code, FAISS, Docker (basic)

Projects

Debate Cascade - Multi-Agent LLM Debate System [GitHub](#) • [Deployment](#) 2026

- Architected a **3-agent LLM pipeline**: Agent Alpha proposes a hypothesis, Agent Victor critiques it adversarially, and Agent Tango synthesises the final verdict, all on **Groq/Llama 3.3 70B**.
- Built an **intent classifier** that auto-routes each query and injects **live context from 6 APIs** (Binance, Finnhub, GNews, NASA, Open-Meteo, Wikipedia) as grounded input before each debate.
- **Tech Stack:** Node.js, React, Express, Vite, Groq (Llama 3.3 70B), Binance, Finnhub, GNews, Open-Meteo, NASA

Fingerprint-Based Blood Group Detection [GitHub](#) 2025

- Trained a **CNN (ResNet/VGG-inspired)** on 6K+ fingerprint images across **8 blood group classes**; built a preprocessing pipeline for noise reduction, rotation normalisation, and scaling.
- Improved accuracy via **transfer learning** and data augmentation; deployed a real-time inference endpoint serving blood group predictions from uploaded fingerprint images.
- **Tech Stack:** Python, PyTorch, TensorFlow/Keras, OpenCV, Flask

NexusRAG - RAG-Powered Document Intelligence [GitHub](#) • [Deployment](#) 2026

- Built an **end-to-end RAG pipeline** for PDF, DOCX, CSV and TXT with NLP chunking, semantic retrieval, and **cited source chips** linking every answer to the exact document chunk.
- Powered by **Groq/Llama 3.3 70B** with persistent multi-session chat history and a polished dark-theme UI built for production use.
- **Tech Stack:** React 18, Groq API, Llama 3.3 70B, NLP chunking, FAISS-style retrieval, Vercel

Semantic Ear - AI Voice Memory System [GitHub](#) • [Deployment](#) 2026

- Built a **voice-listening prototype** simulating an AI memory layer: real-time waveform visualisation, auto-tagging, 2-second silence auto-save, and **semantic keyword search** over stored memories.
- Delivered a **scroll-triggered analytics dashboard** with animated counters, category trend analysis, and a memory timeline; glassmorphism design, fully mobile responsive.
- **Tech Stack:** React 18, Framer Motion, Tailwind CSS, Vite

Experience

AIML Research Centre Assistant 2025

- Research Centre, RV University Tools: TensorFlow/Keras, OpenCV, Python, Git
- Built a **real-time facial expression recognition system** (CNN, FER dataset, 7 emotion classes) owning the **full ML pipeline**: preprocessing, class-imbalance handling, training, hyperparameter tuning, and evaluation.
 - Integrated the model into a **mood-based F&B recommendation prototype**, demonstrating a real-world GenAI downstream application of the computer vision classifier.

Quantum Computing Research Assistant 2024

- Research Centre, RV University Tools: Azure Quantum, Oracle Modules, Python
- Ran **quantum circuit experiments** on Microsoft Azure Quantum; compared classical vs. quantum performance and contributed technical write-ups to active research tracks.

Education

RV University, Bengaluru	2023 - 2027
B.Tech (Hons.) Computer Science and Engineering, AI/ML Major, Fintech Minor	CGPA: 7.74 / 10.0 (Semester 5)
KLE Society School, CBSE	2021
Class X	92.4%

Why You Should Hire Me

Every project here started with a real question, not a tutorial. I read papers, break architectures to first principles, and keep iterating until something ships. Fast to ramp up, comfortable with ambiguity, and focused on building AI that works in the real world. I hit deadlines, communicate clearly, and do not need micromanaging. If you want someone who shows up and delivers, that is me.
