SUMMARY

Third-year CSE undergrad at RV University (AI/ML Major) building production-grade AI and Gen AI systems: multi-agent LLM pipelines, RAG document intelligence, and CNN-based classifiers. Comfortable end-to-end from model design to deployment. Actively working in the Agentic AI and LLM space, seeking an internship to contribute real code from day one.

SKILLS

Languages: Python, JavaScript, TypeScript, HTML/CSS

AI and ML: PyTorch, TensorFlow/Keras, OpenCV, Scikit-learn, CNNs, Transfer Learning

Gen AI and LLMs: LangChain, RAG, GraphRAG, Agentic AI, Prompt Engineering, Groq API, Llama 3.3 70B, MCP Server

Web, Backend and Tools: React 18, Node.js, Express, FastAPI, Flask, Vite, Vercel, Git, Jupyter, VS Code, FAISS, Docker (basic)

PROJECTS

- Debate Cascade - Multi-Agent LLM Debate System** [GitHub](#) [Deployment](#) 2026
- 3-agent LLM pipeline: Agent Alpha proposes a hypothesis, Agent Victor critiques adversarially, and Agent Tango synthesises the final verdict, all on Groq/Llama 3.3 70B.
 - Built an intent classifier that auto-routes queries and injects live context from 6 APIs (Binance, Finnhub, GNews, NASA, Open-Meteo, Wikipedia) before each debate.
 - Tech Stack: Node.js, React, Express, Vite, Groq (Llama 3.3 70B), Binance, Finnhub, GNews, Open-Meteo, NASA
- Fingerprint-Based Blood Group Detection** [GitHub](#) 2025
- Trained a CNN (ResNet/VGG-inspired) on 6K+ fingerprint images across 8 blood group classes; built a preprocessing pipeline for noise reduction, rotation normalisation, and scaling.
 - Improved accuracy via transfer learning and augmentation; deployed a real-time inference endpoint for blood group prediction from uploaded fingerprint images.
 - Tech Stack: Python, PyTorch, TensorFlow/Keras, OpenCV, Flask
- NexusRAG - RAG-Powered Document Intelligence** [GitHub](#) [Deployment](#) 2026
- Built an end-to-end RAG pipeline for PDF, DOCX, CSV and TXT with NLP chunking, semantic retrieval, and cited source chips linking every answer to the exact document chunk.
 - Powered by Groq/Llama 3.3 70B with persistent multi-session chat history and a polished dark-theme UI.
 - Tech Stack: React 18, Groq API, Llama 3.3 70B, NLP chunking, FAISS-style retrieval, Vercel
- Enterprise AI-Powered HRMS (Autonomous HR Copilot)** [GitHub](#) 2026
- Architected an Autonomous HR Copilot that replaces manual HR workflows with AI-driven agents built on FastAPI and LangGraph, cutting average HR request processing time by an estimated 75%.
 - Built a scalable RAG pipeline using a Qdrant vector database and OpenAI models, enabling semantic search across 100+ company compliance policies and training documents with sub-second retrieval latency.
 - Engineered specialized agents (Leave, Payroll, Compliance, Performance) with state-machine workflows to autonomously evaluate requests and issue context-aware approvals with deterministic JSON outputs.
 - Developed a Next.js/TypeScript dashboard for real-time attendance, leave, and compliance analytics; containerized the full microservice stack (Postgres, Redis, Qdrant, n8n) with Docker Compose.
 - Tech Stack: Next.js, FastAPI, LangGraph, PostgreSQL, Qdrant, Docker, TypeScript, n8n

EXPERIENCE

Full Stack Web Developer

May 2026 – Present

Paripakv Foundation (NGO / Social Services) [Next.js](#), [React](#), [Node.js](#), [MongoDB](#), [GSAP](#), [Framer Motion](#), [NextAuth](#), [REST APIs](#), [Cloudinary](#)

- Led end-to-end development of a production-ready NGO web application using Next.js 16 and React 19, cutting page load time by 25-35% through architecture and performance optimization.
- Engineered a secure custom CMS (Admin Panel) with NextAuth authentication, bcrypt password hashing, and MongoDB/Mongoose for managing dynamic content such as blogs and testimonials; integrated Cloudinary and Sharp for optimized image delivery.
- Implemented high-performance UI animations using GSAP, Framer Motion, and Lenis for a premium, smooth-scrolling UX, and restructured frontend components to enhance overall usability.
- Built and managed LinkedIn content strategy for Paripakv, increasing engagement by 20% through a structured posting approach.

AIML Research Centre Assistant

2025

Research Centre, RV University

[TensorFlow/Keras](#), [OpenCV](#), [Python](#), [Git](#)

- Built a real-time facial expression recognition system (CNN, FER dataset, 7 classes) owning the full ML pipeline end-to-end and integrating it into a mood-based F&B recommendation prototype.

EDUCATION

RV University, Bengaluru

2023 – 2027

B.Tech (Hons.) Computer Science and Engineering, AI/ML Major, Fintech Minor

CGPA: 7.74 / 10.0 (Semester 5)

KLE Society School, CBSE

2021

Class X

92.4%

WHY YOU SHOULD HIRE ME

Every project here started with a real question, not a tutorial. I read papers, break architectures to first principles, and keep going until it ships. Fast to ramp up, comfortable with ambiguity, hits deadlines, and does not need micromanaging. If you want someone who shows up and delivers, that is me.
