To Whomsoever It May Concern

I am pleased to recommend Abhishek KS, who did a summer internship with us for 3 mths. During his internship, Abhishek has demonstrated strong technical ability, creativity, responsibility, and a genuine willingness to learn. He has contributed to various technology and digital initiatives, particularly in full-stack web development, website development, dashboard development, automation, and technology-driven solutions. His ability to understand requirements, independently explore solutions, and turn ideas into functional implementations has been one of his strongest qualities.

Abhishek also is able to work across different areas of technology. He has worked with technologies including Python, JavaScript, React, Node.js, Flask/FastAPI, databases, APIs, Git, and modern web development tools. Beyond simply knowing these technologies, he has consistently shown the ability to apply them to practical projects and organizational requirements.

While interning with us, Abhishek has been involved in developing and improving websites and digital platforms for both Paripakv and The Growth Project. He also designed and developed dashboards for both brands, focusing on presenting information in an organized, accessible, and visually effective manner and also built a way to sustainably maintaining the website content without any technical involvement. Through these projects, he demonstrated an understanding of both the technical requirements and the importance of usability, visual presentation, and user experience.

One of the qualities that stands out most about Abhishek is his strong sense of ownership and responsibility. When given a task, he does not simply aim to complete what has asked. He naturally looks for ways to take greater responsibility, improve the solution, and build beyond the original requirements. Abhishek has also demonstrated strong problem-solving skills and adaptability. His curiosity toward emerging technologies, particularly in Artificial Intelligence, Machine Learning, Generative AI, automation, and intelligent systems, further reflects his ambition to continuously expand his technical capabilities and keep learning.

I believe that Abhishek has the potential to grow into a highly capable technology professional and make meaningful contributions to any organization he becomes a part of. I am therefore pleased to recommend Abhishek KS for employment opportunities and internships. I am confident that he will approach future professional opportunities with the same enthusiasm, initiative, willingness to take responsibility, and commitment to continuous learning that he has demonstrated during his time working with us.

Sincerely,

Dr. Pooja Sharma
PARIPAKV FOUNDATION
